

# Success Story

Acupuncture has helped me to overcome difficulties in being able to breathe deeply - getting enough air. It has also helped improve organ health such as the liver and heart, ~~and~~ as seen in a calmer, less stressed outlook. The herbs have spectacularly regulated hormone production - namely reduced or practically eliminated the hot flashes which had been a serious problem for about 25 yrs! The eyes have also improved somewhat in both vision and less dryness. After two years I now want to continue on a maintenance program.
